

# Addendum to Evaluation Criteria

---

The point of the portfolio assignment is to show off your skills to employers. The more custom you get, the better. Be proud of your work.

- The 5-page minimum is in place so you can demonstrate that you're capable of building a more complex website. A single static page is not okay. If you're out of ideas for separate pages, consider writing case studies for a few of your favorite projects.
  - <https://www.shopify.ca/partners/blog/87782278-how-to-write-a-web-design-case-study-that-lands-new-clients>
- If you use Bootstrap, make sure that you customize it and write your own widgets instead of relying on Bootstrap's JavaScript components. The idea is to demonstrate what you are capable of.

- If you cannot run PHP on your hosting service (Github Pages, for example), make sure to have a page showing PHP code that you've written and/or link to any demos you've created using PHP. You need to demonstrate that you can write a script that runs on a server.
